

STRENGTH AND RELIABILITY FOR DATA CENTERS

Solutions that support critical infrastructure

Ideal Tridon Group’s products deliver the strength, safety, and efficiency that modern data centers demand. From strut and pipe supports to cushioned clamps, each solution is specifically engineered to reduce clutter, prevent condensation, and simplify installations. Trusted nationwide, our products keep your infrastructure secure and your systems running at peak performance.

Product Overview

1		Threaded Rod: Hang cable management and mechanical piping systems in a trapeze support.	6		Fiberglass Strut and Accessories: Used for non-conductive applications and mitigating magnetic fields in high-voltage applications.
2		Back-to-Back Strut: Support electrical and mechanical systems; commonly used for assembly of trapeze systems and for heavier loads.	7		Cush-A-Block®: Rooftop support for mechanical, electrical, HVAC systems and equipment
3		Custom Fabricated Fittings (strut accessories): Designed and built to fit your project. Ideal in modular assemblies.	8		Cush-A-Therm®: Prevents condensation and supports pipe in refrigeration applications.
4		Kilo-Shure® Clamp: Prevents condensation and supports pipe in chilled water applications.	9		Cut Strut / Standard Length Strut: Supporting electrical and mechanical systems; pre-galvanized finish for interior applications and hot dip galvanized / stainless steel for corrosive environments.
5		Cush-A-Clamp®: Used to mitigate vibration and corrosion in strut mounted support applications.	10		Bronco® II Pipe Saddle: Supports insulated pipe across strut runs in chilled water or refrigeration applications.
